

Aykah AI Image Naming Guide

Scope: AI-generated lifestyle, product, hero, and portrait imagery produced via the `/aykah: image` skill (Higgsfield CLI / MCP). This is the canonical naming convention for files saved to local folders, shared in Drive, or attached to campaigns.

This guide does **not** apply to real product photography — those live in `Product_Images/` and follow `IMAGE-NAMING-GUIDE.md` in that folder.

Formula

`aykah-<product-handle>-<variant>-<shot-type>.png`

Example

`aykah-mellow-sofa-silver-mist-front.png`
`aykah-mellow-sofa-silver-mist-three-quarter.png`
`aykah-aires-dining-chair-oat-boucle-detail.png`
`aykah-aura-sectional-walnut-hero.png`

Field rules

Field	Rule	Examples
Prefix	Always <code>aykah-</code> (lowercase)	<code>aykah-</code>
<code><product-handle></code>	Shopify handle, lowercase, kebab-case. Match <code>catalog.json</code> exactly. Never invent.	<code>mellow-sofa</code> , <code>aires-dining-chair</code> , <code>aura-sectional</code>
<code><variant></code>	Color or material variant, lowercase, kebab-case. Skip if only one variant exists.	<code>silver-mist</code> , <code>beige</code> , <code>oat-boucle</code> , <code>walnut</code>
<code><shot-type></code>	Exactly one from the locked vocabulary below.	<code>front</code> , <code>three-quarter</code> , <code>lifestyle</code>
Extension	<code>.png</code> for 4K masters · <code>.webp</code> for web-optimized exports	

Shot-type vocabulary (locked)

Shot type	When to use
front	Straight-on hero, centered
three-quarter	Furniture angled ~30–40° to camera
side	Pure profile
back	Rear view (rare — only when product warrants)
detail	Close crop on texture, seam, leg, hardware
hero	Wide editorial composition with full room context
lifestyle	Staged scene with props or people
portrait	Person + product
cutout	Product on white or transparent background

Use exactly **one** per file. Don't combine (no `front-detail` — pick the dominant intent).

Folder structure

One folder per shoot or campaign. Don't dump every file into one bucket.

```
~/Desktop/aykah-<campaign-or-product-slug>/  
  aykah-mellow-sofa-silver-mist-front.png  
  aykah-mellow-sofa-silver-mist-three-quarter.png  
  aykah-mellow-sofa-silver-mist-detail.png
```

For campaigns spanning multiple products, group by campaign:

```
~/Desktop/aykah-spring-2026-launch/  
  aykah-mellow-sofa-silver-mist-hero.png  
  aykah-aires-dining-chair-oat-boucle-lifestyle.png  
  aykah-aura-sectional-walnut-three-quarter.png
```

Versioning re-rolls

If you re-generate the same shot and the file would collide, append `-v2` , `-v3` :

aykah-mellow-sofa-silver-mist-front.png	← original
aykah-mellow-sofa-silver-mist-front-v2.png	← re-roll
aykah-mellow-sofa-silver-mist-front-v3.png	← second re-roll

Never use `-final` , `-FINAL-FINAL` , `-new` , `-latest` , or dated suffixes like `-20260430` .

Don'ts

- No spaces · no underscores · no camelCase — **kebab-case only**
- No `IMG_` prefixes, no `DSC_` prefixes
- No emojis, no parentheses, no brackets
- Never invent a product handle — always match `catalog.json`
- Never use this format for real product photography (separate guide)
- No date/time stamps in filenames — versioning handles iteration

Quick reference card

FORMULA aykah-<product-handle>-<variant>-<shot-type>.png

EXAMPLE aykah-mellow-sofa-silver-mist-front.png

- RULES
- all lowercase, kebab-case
 - product handle = Shopify catalog handle
 - variant = color/material (skip if only one exists)
 - shot type = front | three-quarter | side | back |
 detail | hero | lifestyle | portrait | cutout
 - re-rolls → -v2, -v3 (never -final)
 - one folder per shoot: ~/Desktop/aykah-<campaign>/
